

# Innovative projects in education

## Key elements

#ClimbYourFuture!

Sharing best practices in digital learning and student-centered pedagogies:

### Online workshops developed:

“Student-Centered Pedagogies” - share best practices in student-centered teaching-learning methodologies;

“Digital Learning Workshops” - share best practices in digital learning and educational technology integration.

### Student counseling and well-being services:

- Counseling/guidance activities and experiences - social integration of international students;

- Research activities and experiences - measuring the impact of counseling activities;

- Local, regional, national or international professional partnerships and/or collaborations to support potential joint activities

- Responds to needs;
- Promotes the sharing of good practices in student-centered pedagogies through workshops;
- Compares connected campus models.

UNIVERSITÉ SAVOIE MONT-BLANC UNITA FRANC 2024 With the support of the Erasmus+ Programme of the European Union

Quality teaching is demanding, complex and challenging, and requires exquisite preparation of teachers and professors. It is not enough to know the content; other skills are required, for instance the ability to highlight the essential and make the connection between theory and practice, to provide constructive feedback, to stimulate the student's reflexive process, as well as class management skills. Apart from scientific knowledge, things also evolve for the taught and in the way of teaching.

On one hand, it is crucial to provide lecturers and teachers with the tools and training to strengthen the student-centered approach. On the other hand, traditional teaching methods still exist, university teachers and professors also want to be at the forefront of teaching innovation. Moreover, non-teaching staff must be able to keep up with the innovation in order to provide help to students and teachers and also support in meeting their needs.

UNITA created a working group to provide rapid training on current topics as well as proportionate skills development for students, lecturers and teachers and non-teaching staff. This group also works on identifying best practices through the exchange of information, methods, and techniques between different Universities in order to promote knowledge, growth and personal and professional development.
